China Environment and Development Review: China's Environment and Development in the Era of Globalization

This book focuses on climate change and China, as well as international trade and China's environmental issues. It investigates the impact of globalization on sustainable development. As a new public issue, climate change has placed the whole world in two dilemmas, commercial rationality dominating our world cannot resolve such dilemmas, therefore greater wisdom is desperately needed, e.g. establishing new civilized norms and value system. The relationship between trade and poverty is discussed, and further effects of globalization on worldwide both environment and natural resource usage are analyzed by those quantitative analysis methods.
